

Redesign of Polarion HTML pages

About Polarion

Polarion is a web-based Application Lifecycle Management tool, used to create and manage documents (specifications, plans, etc) and individual work items (tasks, defect reports, test cases). It is used in Project Management. More info at www.polarion.com

What is the job about

We need to redesign some HTML pages in Polarion:

- To make them visually simple and easy to understand
- To advise about Graphical Style and provide examples
- To locate information in “the right” places on the pages
- To make our pages look more like in this examples:
<http://webupdates.polarion.com/2015/live-reporting.php>

The Designer is required:

- To give advice about Design & Structure of documents from Visual point of view
- To provide graphical design of pages
- To suggest structure/content of pages after discussion of the content with our company.

Required job skills – one of the following: PowerPoint, HTML, Photoshop.

Examples of existing pages

The picture below show “Home Page” of the project in Polarion. The page explains which WorkItems are available in Project and how they shall be used.

On this picture we need to improve section “Create Workitem” and the picture/diagram “How to use the project”.

The screenshot displays the Polarion Project Maintenance interface. The main content area is titled "Welcome to the Project Maintenance" and includes a description: "This project is used to track Infrastructure Maintenance (Projects Maintenance, changes in Polarion, GIT, Jenkins, etc)".

Create Workitem

Issue

| If you.. | ..then Create |
|---------------------|------------------------|
| Have a Problem? | Task Change Request |
| Have Info to Share? | News & Announcements |
| Have Idea? | Wish List Idea |

How to use the project

POLARION Work Items

The diagram illustrates the workflow between the Development Team (Managers, Developers, Testers, etc) and the Infrastructure Team. It shows the flow of work items: News & Announcements, Wish List Idea, Change Request, Task, Issue, and Test Case. Arrows indicate the direction of flow and actions like "solve" and "Verify".
